

ABHINANDAN NAIK

FULL-STACK SOFTWARE ENGINEER

Bengaluru, Karnataka | +91 7899951612 | abhinandannaik1717@gmail.com |   

Full-Stack Software Engineer focused on building scalable, secure, and high-performance web applications. Experienced in architecting robust backend systems and REST APIs, supported by efficient data management. Adept at taking ownership of the full development lifecycle—bridging secure backend logic with dynamic frontend interfaces—while streamlining deployments through modern CI/CD pipelines.

AREA OF EXPERTISE

- Java & Spring Boot
- Backend System & Microservices Architecture
- Interactive Frontend Engineering
- Relational & Cloud Database Management
- Continuous Integration & Deployment (CI/CD)
- Application Security & Identity Management
- Software Design Patterns & Clean Code
- Generative AI Integration & Prompt Optimization

PROFESSIONAL EXPERIENCE

Software Engineer , Digit Insurance | India | Motor Loader & Motor Insurance **July 2025 - Present**

- Architected and deployed scalable backend services for the Motor Loader and Single Page modules using Java and Spring Boot, integrating Redis for high-speed caching to optimize bulk policy ingestion and multi-mode payment processing.
- Designed and optimized complex, high-volume database schemas using PostgreSQL, utilizing DBeaver for advanced query tuning and data administration to ensure strict data integrity across core insurance transactions.
- Streamlined the software development lifecycle by integrating Bitbucket and Jenkins for automated deployment pipelines, orchestrating scalable containerized services via Kubernetes to ensure high-availability, zero-downtime releases.
- Leveraged Dynatrace for continuous endpoint validation and performance monitoring, contributing to Agentic AI automation initiatives that significantly reduced system latency, memory footprint, and maintenance overhead.

PROJECTS

- **FlowSync | AI-Powered Collaborative Kanban Board**

Developed a real-time task management system leveraging Next.js and Supabase to orchestrate low-latency data synchronization, scalable state management, and AI-driven workflow automation.

- **FlashPoll | Real-Time Instant Voting Application**

Developed a low-latency instant voting platform using Node.js and Express, featuring real-time data broadcasting, secure session management, and a highly responsive user interface.

- **Smart-Bin | IoT-Based Urban Waste Management System**

Engineered an end-to-end IoT solution by integrating ESP8266 microcontrollers and sensor hardware with a centralized admin dashboard, enabling real-time location tracking, bin capacity monitoring, and dynamic route optimization for municipal truck fleets.

EDUCATION

Bachelor of Engineering (Hons.) in Information Science and Engineering **JAN 2022 - JUNE 2025**
New Horizon College of Engineering

Comprehensive study in distributed systems, modern web architecture, and secure software development, translating theoretical computer science into scalable enterprise solutions.

ADDITIONAL INFORMATION

- **Digit Mastermind (3x Winner):** Recognized consecutively by Digit Insurance leadership for exceptional system optimization and full-stack feature delivery.
- **Algorithmic Problem Solving:** Achieved a highly competitive LeetCode contest rating of 1847.
- **Generative AI Specialist:** Trained extensively in prompt optimization and cloud-based AI architecture through the Google Cloud Gen AI Academy.
